SUMMARY

AI/ML Engineer with hands-on experience in Python, machine learning pipelines, and production-grade software automation. Built an XGBoost-based predictive model achieving **94% fault detection accuracy** and delivered CI/CD-integrated validation systems. Actively developing GenAI and LLM skills — prompt engineering, LangChain, Hugging Face — with a drive to deploy real-world intelligent automation solutions.

SKILLS

AI / GenAI	LLMs, Prompt Engineering, AI Agents, OpenAI API, Hugging Face, LangChain, RAG workflows
ML & Data	Scikit-learn, XGBoost, Random Forest, SHAP, NumPy, Pandas, Streamlit, model evaluation
Dev & Tools	Python, C++, REST APIs, FastAPI, Git, GitHub CI/CD, FAISS/Pinecone (conceptual), Linux, Jupyter

WORK EXPERIENCE

Graduate Engineer Trainee — Industrial Software <i>Alstom Transport India Ltd., Bangalore</i>	Aug 2025 – Apr 2026
- Built Python automation scripts for regression testing and log parsing — reducing manual QA effort by ~40%; integrated into a Git-based CI/CD pipeline for automated checks on every commit. - Developed a modular C++ validation engine (Oat++ backend) with configurable rule sets for structured data verification; tracked defects in JIRA across cross-functional global teams.	
Industrial Trainee — SCADA & Grid Automation <i>SJVN Ltd., Shimla</i>	May – Jun 2024
Studied real-time SCADA monitoring for a 1500 MW power station; analysed sensor data pipelines and hardware-software integration applicable to industrial AI/IoT deployments.	

PROJECTS

Transformer Predictive Maintenance — ML Pipeline	<i>Python, XGBoost, SHAP, Streamlit</i>
- Dual-stage ML framework (SVR, Random Forest, XGBoost) predicting transformer health and maintenance priority, achieving 94% fault detection accuracy on class-imbalanced real-world data. - Applied SHAP explainability for model validation; deployed Streamlit app with live inference — demonstrating end-to-end AI application delivery.	
AI Chatbot with RAG — Document Q&A Agent	<i>Python, LangChain, FAISS, OpenAI API</i>
- Built a Retrieval-Augmented Generation (RAG) chatbot using LangChain and FAISS vector store, enabling accurate Q&A over custom documents via OpenAI's API. - Engineered prompt templates for context injection and hallucination reduction; exposed as a REST API for downstream platform integration.	
AI Automation Pipeline — Web Scraping + Summarisation	<i>Python, Hugging Face, FastAPI</i>
- End-to-end AI automation workflow that scrapes web content, chunks and embeds text, and generates summaries using a Hugging Face transformers model. - Deployed as a FastAPI REST endpoint, enabling plug-in integration into software platforms and demonstrating practical AI workflow productionisation.	

EDUCATION

2021 – 2025	B.Tech in Electrical Engineering — NIT Hamirpur	(CGPA: 7.91/10)
	Relevant: Data Structures & Algorithms, Digital Signal Processing, Embedded Systems, ML (self-study)	

ACHIEVEMENTS & COURSES

ML Achievement	Achieved 94% fault detection accuracy on a class-imbalanced real-world transformer dataset using XGBoost with SHAP explainability — independently designed and deployed end-to-end.
Courses	Complete Data Science, Machine Learning, DL & NLP Bootcamp — <i>Krish Naik, KRISHAI Technologies (Udemy)</i> Complete Agentic AI Bootcamp with LangGraph & LangChain — <i>Krish Naik, KRISHAI Technologies (Udemy)</i>
